## SCOPE OF WORK

### 1. Installation Support

- Installation of custom on premise Matrix deployment which includes vendor support for TDEM CIS staff through the initial deployment of a dedicated self-hosted Matrix homeserver and Riot/Web instance.
- This includes setting up appropriate monitoring and will allow the TDEM CIS backup strategy to be used.
- Installation on an email bot

The package will be considered complete once:

- TDEM CIS staff is able to register and use the said server to chat via the associated Riot/Web instance.
- Baseline monitoring functions are in place allowing to TDEM CIS staff to make sure the server is running appropriately.
- The email bot is up and running.

### 2. Support in developing an integration to the WebEOC authentication system

- Additionally, would be using the TDEM developed API to pass WebEOC user credentials over to Matrix to log into the homeserver automatically.

The package will be considered as delivered once a user is able to log in the homeserver using their WebEOC credentials.
